

1. 데이터는 공유 엑셀 또는 깃허브의 dummy data 다운

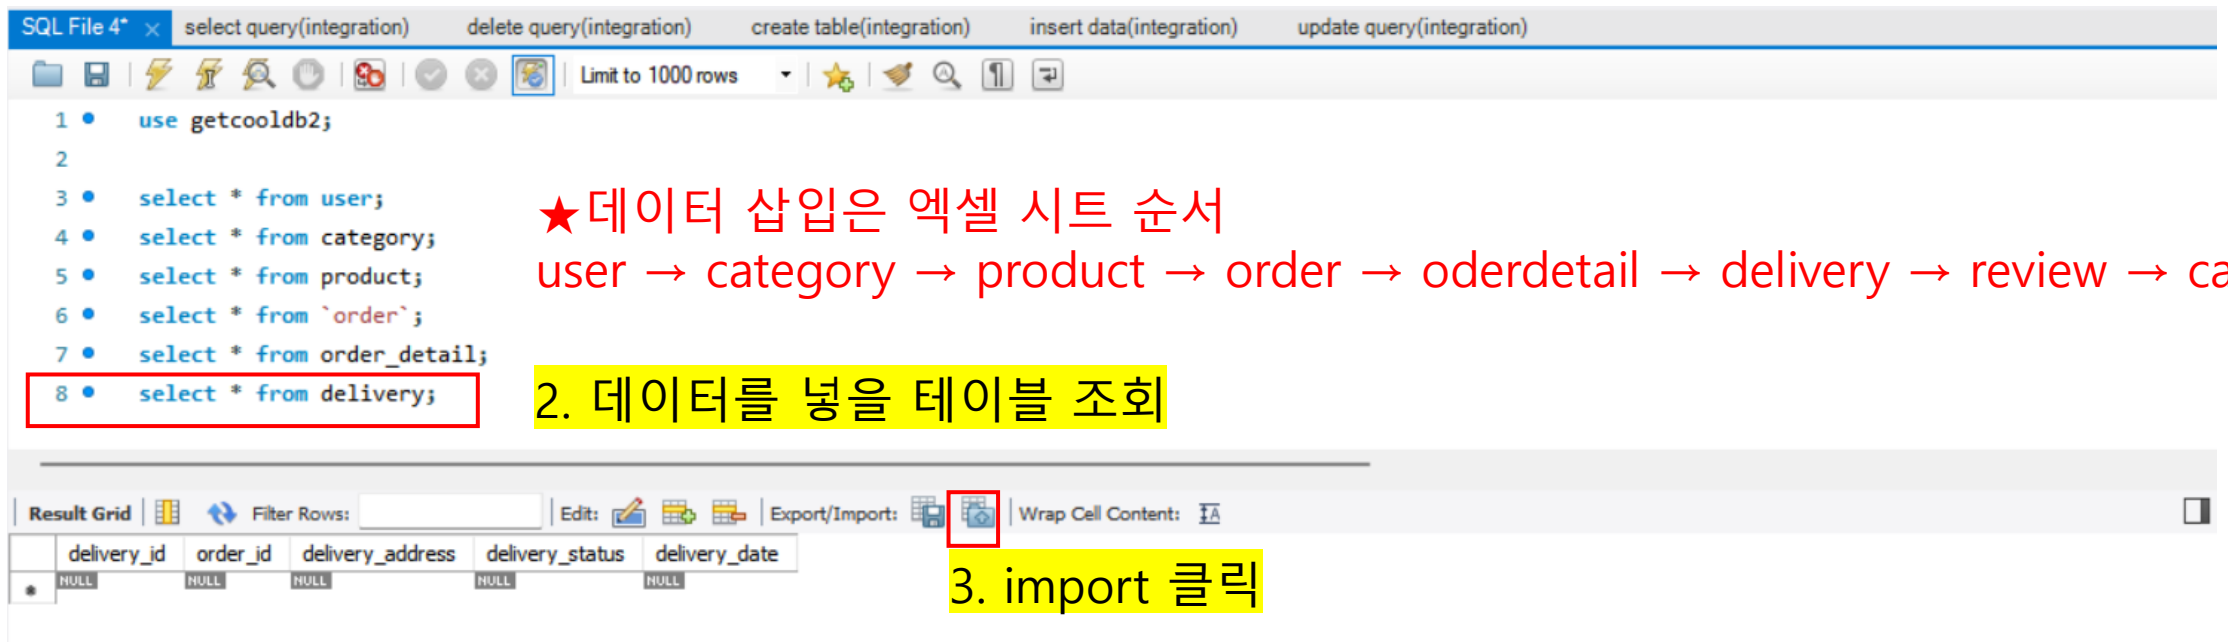

엑셀 : [엑셀 데이터베이스 내용 정리 - Google Sheets](#)

깃허브 : <https://github.com/ghkdwlstks/getcool> (통합 DB → dummy data)

(데이터에 , 가 있으면 삽입 안될 수 있음)

(서식에서 쉼표 제거해주세요)

깃허브에 올린 데이터는 확인해봤는데 이상 없었습니다.

The screenshot shows a SQL client interface with a query editor and a result grid. The query editor contains a list of SQL queries, with the eighth query, `select * from delivery;`, highlighted with a red box. To the right of the query editor, there is a red star icon and the text "데이터 삽입은 엑셀 시트 순서" followed by a sequence of table names: `user → category → product → order → oderdetail → delivery → review → cart`. Below the query editor, there is a yellow box with the text "2. 데이터를 넣을 테이블 조회". At the bottom of the interface, there is a result grid showing columns `delivery_id`, `order_id`, `delivery_address`, `delivery_status`, and `delivery_date`, all with `NULL` values. To the right of the result grid, there is a yellow box with the text "3. import 클릭" and a red box around the "Import" button in the toolbar.

```
1 • use getcooldb2;
2
3 • select * from user;
4 • select * from category;
5 • select * from product;
6 • select * from `order`;
7 • select * from order_detail;
8 • select * from delivery;
```

★데이터 삽입은 엑셀 시트 순서
`user → category → product → order → oderdetail → delivery → review → cart`

2. 데이터를 넣을 테이블 조회

3. import 클릭

	delivery_id	order_id	delivery_address	delivery_status	delivery_date
*	NULL	NULL	NULL	NULL	NULL

Table Data Import

Select File to Import

4. 데이터 가져오기

Table Data Import allows you to easily import CSV, JSON datafiles.
You can also create destination table on the fly.

File Path: C:\Users\윤희시현\OneDrive\바탕 화면\dummy data\엑셀 데이터베이스 내용 정리 - delivery.csv

Table Data Import

Select Destination

5. 기존 테이블 사용

Select destination table and additional options.

☒ Use existing table: getcooldb.delivery

☐ Create new table: getcoold , 엑셀 데이터베이스 내용 정리 - delivery

☐ Truncate table before import

Table Data Import

Configure Import Settings

Detected file format: csv

Encoding: utf-8

Columns:

Source Column	Dest Column
<input checked="" type="checkbox"/> delivery_id	delivery_id
<input checked="" type="checkbox"/> order_id	order_id
<input checked="" type="checkbox"/> delivery_address	delivery_address
<input checked="" type="checkbox"/> delivery_status	delivery_status
<input checked="" type="checkbox"/> delivery_date	delivery_date

6. Column 확인

delivery_id	order_id	delivery_a...	delivery_st...	delivery_d...
